

200 West Street Garage

Waltham, Massachusetts

Planning, design and construction of the precast / prestressed concrete parking garage structure at 200 West Street was accomplished in just six months. Once planning approval from the city was received in mid - October, Strescon Limited immediately undertook the design and fabrication of the columns, beams, spandrel panels, double tee and other precast concrete building elements.

In January of the New Year, the first components were shipped to the site and the erection was started with three months of winter's cold and unpredictable weather ahead. Strescon's, factory cast components permitted erection activity to continue in almost all weather conditions and resulted in the three-story garage structure being completed in April, as scheduled. The contrasting textures on the garage's spandrels and columns was accomplished by using two different weights of sandblast. The structure can accommodate 420 vehicles.
