

Maritime Life Office Tower

Halifax, Nova Scotia

*Focus on
The Building Envelope*

Maritime Life expanded by adding a large new high rise office tower to their complex in the west end of Halifax. This new building was built to accommodate their office requirements in the region.

The architect selected architectural precast concrete panels to outline and highlight the tinted glass curtain wall. The finish of the precast panels simulated natural black and grey granite cut stone.

The building was designed to fit the site, which has a lot of mature trees, to achieve a pleasant mix of commercial property within a residential community.
